

Tuberkulos

- om diagnostik, handläggning och smittrisk i låginkomstländer

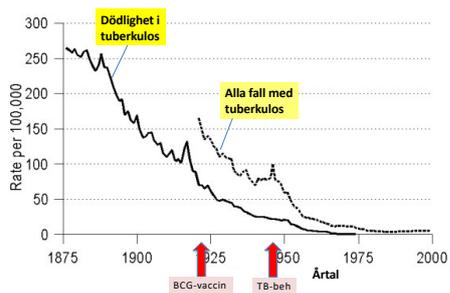

Workshop Holsbybrunn 22 april 2023
Leif Dotevall, infektionssläkare Västra Götaland

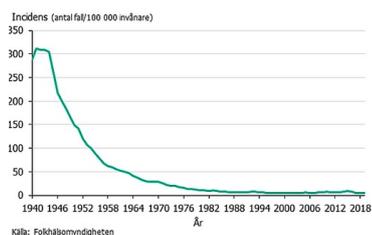

Hold your Breath™ (2015) Painting from WHO website - Paulina Siniatkina

Tuberkulos i Danmark 1875 - 2000

Incidens av TB i Sverige, 1940-2019

Who is most affected?

Poor, crowded & poorly ventilated settings

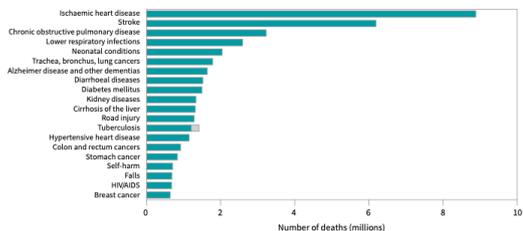

Half a million women and over 65,000 children die of TB each year; 10 million "TB" orphans

Migrants, prisoners, minorities, refugees face risks, discrimination & barriers to care

TB linked to HIV infection, malnutrition, alcohol, drug and tobacco use, diabetes

Top causes of death worldwide in 2019^{a,b}

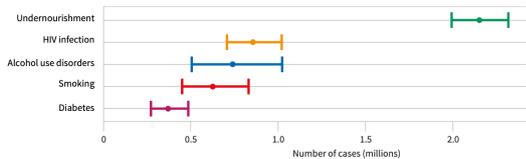

Deaths from TB among HIV-positive people are shown in grey.

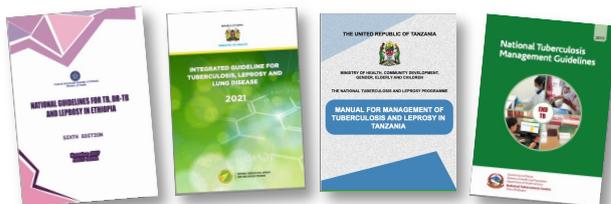

Global Tuberculosis Report 2022 (WHO)

Global estimates of the number of incident TB cases attributable to selected risk factors, 2021^a

Global Tuberculosis Report 2022 (WHO)

Process of care		Quality impact		
<p>2-month delay in diagnosis</p> <p>Only 1 in 2 patients with drug-susceptible tuberculosis, 1 in 5 patients with MDR tuberculosis, and 1 in 5 patients with latent tuberculosis infection are adequately diagnosed and treated</p> <p>Patients lost to follow-up: 4-38%</p>		<p>Delays in diagnosis results in</p> <p>High costs to patients (patients spend more than half of annual income on care)</p> <p>Increased waiting times for treatment</p> <p>Probably low patient satisfaction with care (although additional research is needed)</p>		
<p>50-60% patients begin seeking care in informal (eg, agencio or homeopathic doctors, and pharmacists) and private sectors</p>	<p>Governance</p> <p>52% HBCs recommend Xpert MTR/RIF as initial test. 47% have implemented this</p> <p>In 8 low-income HBCs, domestic funding represents <7% of NTP budget needs</p>	<p>Platforms</p> <p>1.1 microscopy labs per 100,000 population</p> <p>1.3 DST per 5 million population</p> <p>Limited accessibility to tuberculosis services at community level</p>	<p>Workforce</p> <p>3 health-care providers are seen before diagnosis</p> <p>28%-45% of providers correctly manage tuberculosis cases</p>	<p>Tools</p> <p>10 sputum smears for every Xpert test in HBCs</p> <p>20% of patients in need of bedaquiline have received it</p>

"About one quarter of the world's population is infected with tuberculosis bacteria. Only a small proportion of those infected will become sick with TB"

Global Tuberculosis Report 2022 (WHO)

Latent tuberkulos

- Inga symtom. "Frisk"
- Ingen risk för smitta

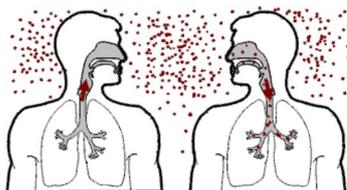

Aktiv tuberkulos

- "Sjuk", kliniska symtom
- Smittsamhet hos vissa med lung-TB
- Ingen smittsamhet vid extrapulmonell TB

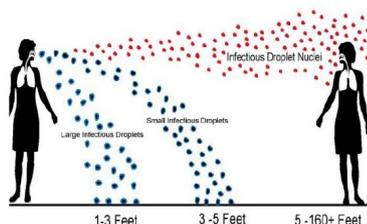

Hur smittar tuberkulos?

1. Luftburen smitta via droppkärnor
2. Peroral (via opastöriserad mjölk)
3. Hematogen – placentär spridning (mor- barn)

- Smitta via upphostningar, aeroliserade genom hosta, nysning, utandning och krymper genom torkning...
- Oftast relativt låg smittsamhet
- Närhet ökar risk
- Vissa patienter "superspridare"
- Tuberkulos smittar inte utomhus

Infectious Droplets & Droplet Nuclei travel lengths

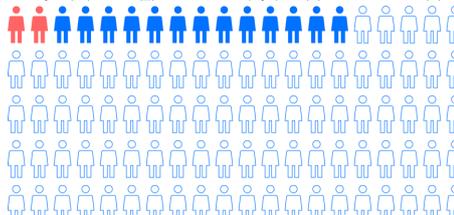

Tuberkulosens förlopp efter smitta...

Outcomes

Not everyone who has tuberculosis will get sick, or die, from it

For every 100 people with TB (□), five to 15 will develop symptoms (■) and one to two will die (■)

BloombergOpinion

Latent tuberkulos

- hur stor är risken att reaktivera och insjukna i aktiv tuberkulos?

Bild: Henrik Mellström Dahlgren, Smittskydd Västra Götaland

Latent tuberkulos → Aktiv tuberkulos
- en glidande skala....

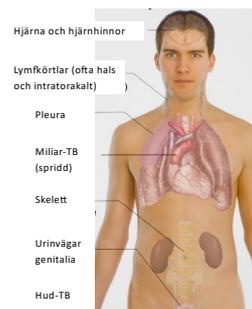

Riskfaktorer för progress av LTBI till aktiv TB (Källa: ECDC)

Riskfaktor	Relativ risk hos person med LTBI och riskfaktor jämfört med befolkning i stort (LTBI-status okänt)
Hiv-positiv *	183.0 (41.7-803.4)
Silikos	170.3 (137.9-210.2)
Dialys	41.4 (37.9-44.8)
Behandling med TNF-alfa-hämmare	16.2 (14.6-18.0)
Diabetes	10.3 (5.9-17.6)

*inga uppgifter om antiretroviral behandling eller inte

Lung-TB
- ca 60 %

Extrapulmonell tuberkulos
- ca 40 %

Diagnostik - aktiv TB

Val av primära diagnostiska metoder vid misstanke om aktiv tuberkulos

Lokalisation	Mikrobiologi	Radiologi	Övrigt
Lungor	Mikroskopi, PCR och odling x 3 på sputum	Lungtg (ev DT thorax)	Minst ett morgonprov. Infuserat sputum vid svårighet att få bra prov.
Lymfkörtlar	PCR och odling på punktat/biopsi	Lungtg (ev DT thorax)	PAD (DBS, separata rör)
Pleurit	PCR och odling på pleurabiopsi och pleuravätska (best <100 ml)	Lungtg (ev DT thorax)	Kontakt med lungmedicin för biopsi/PAD (DBS, separata rör)
Spondylodisk	PCR och odling på biopsi (punktat)	MR halsrygg	Nedre thoraxal eller övre lumbalnivå vanligtast.
Intraabdominell	PCR och odling på feces (>1 ml) x 2-3 och punktat/biopsi (konst, peritonium, sår)	DT buk med kontrast	PAD (DBS, separata sterila rör)
Urogenital	PCR och odling på morgonurin (100 ml) x 3.	DT buk med kontrast	Ev kontakt med urolog/gynekolog
Meningit	PCR och odling på likvor (minst 1 ml och best <50)	MR hjärna	
Miljår	PCR och odling på saccum, urin, feces. Biodödlig och benmärgsbiopsi för mykobakterier	DT thorax	Likvorn med LP och MR hjärna. Särskilda flaskor används för blododling av mykobakterier (kontakta närmaste mykobakterielab).

SILF Vårdprogram Tuberkulos 2023

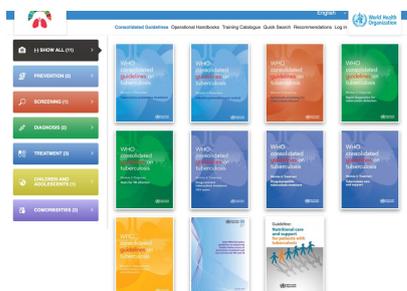

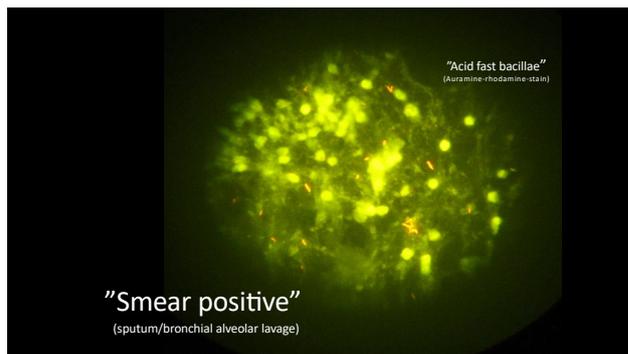

Mycobakterie-odling

– särskilda odlingsrör eller tomma rör

Direkt-mikroskopi

Limit of detection of 5000-10 000 bacilli per millilitre of sputum

Xpert MTB RIF Test Procedure English

<https://www.youtube.com/watch?v=wmcjEb8tPaY>

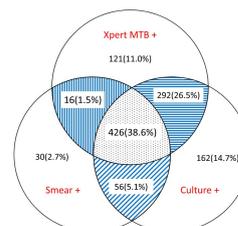

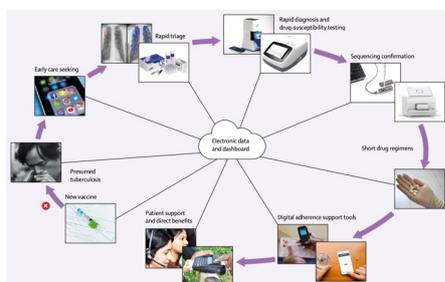

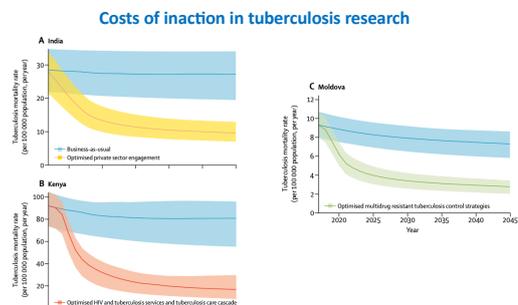

Fig. 1 Agreement of sputum smear, culture and Xpert MTB in 1103 pulmonary tuberculosis patients with all tests in Shanghai, China, in the first half of 2018. Smear + = smear positive; Culture + = culture positive; Xpert MTB + = Xpert MTB positive. The blue lines represent the agreement between two diagnostic techniques used, and the dot area shows the agreement among all three tests.

BCG vaccination

- The bacille Calmette-Guérin (BCG) vaccine has existed for **80 years**
- One of the **most widely used of all current vaccines**
 > 80% of neonates and infants in countries where it is part of the national childhood immunization programme
- BCG vaccine has a documented protective effect **against meningitis and disseminated TB in children**
- It does **not prevent primary infection** and, more importantly, does **not prevent reactivation** of latent pulmonary infection, the principal source of bacillary spread in the community
- The impact of BCG vaccination on transmission of Mtb is therefore **limited**.

Waning BCG vaccine efficacy - A childhood vaccine
